

Benchmark Performance & Service

Powder Coating Spray Paint Booths

The right equipment when you're powder coating can make the difference between good, and great! Depending on the type of coating you use and the volume of the work that you do, you may need 3 stage filtration or cartridge filtration.

Marathon will ensure that you have what you need, and that you can use it to its maximum effect, and with the minimum operational cost.

From small parts to large components, Marathon has what you need!

Call Marathon today at (310) 791-5601.

Powder Coating Features & Components

Intake Filters

Quality Intake filter media is one of the critical components in maintaining a "clean room" type of dust free environment. Marathon Finishing provides high quality filter media with dust lock technology for a dust free finish every time.

Fans/Motors

Our fans and motors are US made and AMCA certified, with spark resistant aluminum fan blades, high efficiency motors, and belt driven tubeaxial fans. The streamlined belt tunnel ventilates the drive compartment with air from outside the fan housing.

3 Stage Exhaust Filters

A pre-filter intended to catch the larger particulates, a pocket or "bag" filter to catch the smaller particulates, and a final filter, to catch anything missed by the first 2 filters.

This filter type can be vacuumed clean and re-used to extend the filter life, and can be purchased at our online store.

Cartridge Exhaust Filters

These filters are fully self contained cylindrical filters, and filter the air by drawing the air from the outer layer to the center of the cartridge, and then exhausting the clean air from the center.

The cartridge filters are SELF CLEANING! Filters for all of Marathon products can be purchased from our online store.

Doors

Our large main doors are all single skin construction, which reduces weight. This minimizes long term issues of maintenance that may arise. Our smaller (3ft x 7ft) personnel doors are dual skin, but do not experience problems due to weight.

Lighting

Marathon takes great care when determining all aspects of illumination (location, orientation, etc.) for all of our spray booths, so you get the best lighting possible in your work space, with UL listed LED fixtures and one year warranty.

Construction

All of our paint booths are made using 18 gauge galvanized steel precision pre punched on center every 6" on 2" companion flanges. All of our spray paint booths are **ETL Listed** to ensure we build to the highest and SAFEST quality standards!

Did You Know?

The **ETL Listing** (certification) is confirmation that every aspect of our construction meets or exceeds the build and safety code standards established by NFPA 33. This is important, as your Fire Inspector will require proof of compliance before approval.

Call Us Today at **310 791-5601** for a Quote & More Information

Made to Exceed Your Expectations

All of Marathon's spray paint booths are manufactured using 18 gauge galvanized steel panels and precision cut using CNC equipment.

Our booths are assembled using nut & bolt construction with precision CNC punched holes every 6" on center of 2" companion flanges, resulting in a rugged structure that is built to meet or exceed NFPA and OSHA safety code requirements.

All of our LED light fixtures are UL listed for use in their respective applications. Lights been properly distributed throughout the work environment to provide optimal lighting, minimize shadow casting, and create a well lit & safe work environment.

All of our spray paint booths are designed to provide a superior experience with simple operation and easy maintenance, using components that are easily sourced and easy to replace.

Marathon Finishing will design, build, and install your spray paint booth to your exact specifications, to fit your needs, and your available space. Custom does not mean more expensive. All of our paint booths are manufactured at our facility in Temecula, CA. We only use components from trusted US manufacturers that deliver performance, quality, and safety.

Every day.

Air Flow

Ambient (surrounding environment) air is pulled in through the filters at the front of the spray booth, flows horizontally across the booth (cross flow), and is exhausted up and out of the booth.

While heating the incoming air CAN be accomplished, the simple "In-Door Filter" design of this spray paint booth makes it cost prohibitive to do so.

Powder Coating Standard Model Sizes

We offer a wide array of standard model sizes. Take a look at the chart below and see if what you need is here. If it's not, don't worry! We can either modify an existing standard size model to suit your requirements, or we can custom design a solution to fit your exact requirements and facility. We make what you need... exactly what you need. Every time.
