Made to Last, Built to RUN! Marathon Finishing Systems

Reverse Air Flow Features & Components

Intake Filters

Quality Intake filter media is one of the critical components in maintaining a "clean room" type of dust free environment. Marathon Finishing provides high quality filter media with dust lock technology for a dust free finish every time.

Fans/Motors

Our fans and motors are US made and AMCA certified, with spark resistant aluminum fan blades, high efficiency motors, and belt driven tubeaxial fans. The streamlined belt tunnel ventilates the drive compartment with air from outside the fan housing.

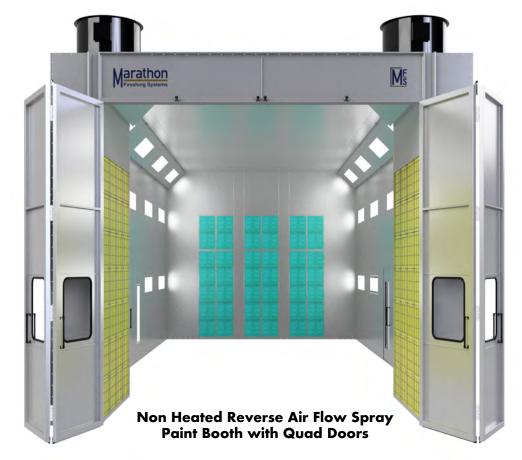

Exhaust Filters

Our spray booths use only "Industry Standard" sized filters. Easily replaceable from any filter supplier, online, or from Marathon directly. Marathon provides high efficiency fiberglass paint arrestor pads included with purchase.

Lighting

Marathon takes great care when determining all aspects of illumination (location, orientation, etc.) for all of our spray booths, so you get the best lighting possible in your work space, with UL listed LED fixtures and one year warranty.

Our large main doors are single skin construction, which reduces weight. This minimizes long term maintenance issues that may arise. Our smaller (3x7) personnel doors are dual skin, but do not experience problems due to weight.

Construction

All of our paint booths are made using 18 gauge galvanized steel precision pre punched on center every 6" on 2" companion flanges. All of our spray paint booths are ETL Listed to ensure we build to the highest and SAFEST quality standards!

Call Us Today at 310 791-5601 for a Quote & More Information

Did You Know?

The ETL Listing (certification) is confirmation that every aspect of our construction meets or exceeds the build and safety code standards established by NFPA 33. This is important, as your Fire Inspector will require proof of compliance before approval.

Made to Exceed Your Expectations

All of Marathon's spray paint booths are manufactured using 18 gauge galvanized steel panels, precision cut using CNC equipment.

Our booths are assembled using nut & bolt construction, precision CNC punched every 6" on center of 2" companion flanges, resulting in a rugged structure, that is built to meet or exceed NFPA and OSHA safety requirements.

All of our LED light fixtures are UL listed for their respective applications, and properly distributed throughout the work environment to provide optimal lighting with minimum shadow casting, for a well lit, safe work environment.

All of our spray booths are designed to provide a superior experience, simple operation, and easy maintenance using components that are easily sourced and easy to replace.

Marathon Finishing will design, build, and install a spray paint booth to your exact specifications, to fit your needs, and your available space. Custom does NOT mean more expensive! All of our spray paint booths are manufactured at our facility in Temecula, CA, and are equipped with components from trusted US manufacturers that deliver quality and safety.

Every day.

Reverse Air Flow

Intake, Heated Booth:

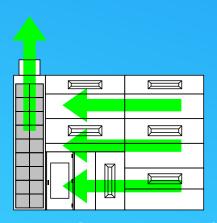

Outside air is filtered twice, once as it enters in through the air make up unit (heater), and again as it passes through the rear intake plenum filter wall. In this example this booth is equipped with a Spray & Cure heating unit.

Heated Reverse Air Flow

Intake, Non Heated Booth:

The outside air is filtered once, through the rear intake plenum filters before entering the work area.

Non Heated Reverse Air Flow

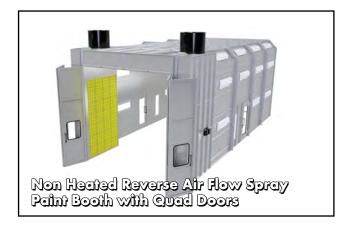

Exhaust:

The filtered air travels horizontally towards the front of the booth (cross flow). Finally, the air is filtered of overspray and particulates by the exhaust filters before exiting the booth. Marathon uses standard size intake and exhaust filter media, readily available from most paint and refinishing suppliers.

Engineered to a Higher Standard

Reverse Air Flow - Marathon Finishing Systems

We offer a wide array of standard model sizes. Take a look at the chart below and see if what you need is here. If it's not, don't worry! We can either modify an existing standard size model to suit your needs, or we can custom design a solution to fit your exact requirements and facility. We make what you need... exactly what you need. Every time.
