

Benchmark Performance & Service

Side Down Draft Spray Paint Booths

The Side Down Draft spray booth is the lower cost down draft alternative for automotive, truck, large equipment and industrial applications. Unlike the Full Down Draft spray booth, this booth does not require a rather expensive "PIT" installed underneath to serve as an exhaust plenum.

The air flow is still a down draft booth (considered by many experts to be THE superior air flow type), so you get all of the benefits without the higher cost.

Check out the other reasons to buy from Marathon Finishing Systems.

Side Down Draft Features & Components

Intake Filters

Quality Intake filter media is one of the critical components in maintaining a "clean room" type of dust free environment. Marathon Finishing provides high quality filter media with dust lock technology for a dust free finish every time.

Fans/Motors

Our fans and motors are US made and AMCA certified, with spark resistant aluminum fan blades, high efficiency motors, and belt driven tubeaxial fans. The streamlined belt tunnel ventilates the drive compartment with air from outside the fan housing.

Exhaust Filters

Our spray booths use only "Industry Standard" sized filters. Easily replaceable from any filter supplier, online, or from Marathon directly. Marathon provides high efficiency fiberglass paint arrester pads included with purchase.

Lighting

Marathon takes great care when determining all aspects of illumination (location, orientation, etc.) for all of our spray booths, so you get the best lighting possible in your work space, with UL listed LED fixtures and one year warranty.

Non Heated Side Down Draft Spray Paint Booth with Quad Doors

Doors

Our large main doors are single skin construction, which reduces weight. This minimizes long term maintenance issues that may arise. Our smaller (3x7) personnel doors are dual skin, but do not experience problems due to weight.

Construction

All of our paint booths are made using 18 gauge galvanized steel precision pre punched on center every 6" on 2" companion flanges. All of our spray paint booths are **ETL Listed** to ensure we build to the highest and SAFEST quality standards!

Call Us Today at **310 791-5601**
for a Quote & More Information

Did You Know?

The **ETL Listing** (certification) is confirmation that every aspect of our construction meets or exceeds the build and safety code standards established by NFPA 33. This is important, as your Fire Inspector will require proof of compliance before approval.

Made to Exceed Your Expectations

All of Marathon's spray paint booths are manufactured using 18 gauge galvanized steel panels and precision cut using CNC equipment.

Our booths are assembled using nut & bolt construction with precision CNC punched holes every 6" on center of 2" companion flanges, resulting in a rugged structure that is built to meet or exceed NFPA and OSHA safety code requirements.

All of our LED light fixtures are UL listed for use in their respective applications. Lights been properly distributed throughout the work environment to provide optimal lighting, minimize shadow casting, and create a well lit & safe work environment.

All of our spray paint booths are designed to provide a superior experience with simple operation and easy maintenance, using components that are easily sourced and easy to replace.

Marathon Finishing will design, build, and install your spray paint booth to your exact specifications, to fit your needs, and your available space. Custom does not mean more expensive. All of our paint booths are manufactured at our facility in Temecula, CA. We only use components from trusted US manufacturers that deliver performance, quality, and safety.

Every day.

Marathon
Finishing Systems

Side Down Draft Air Flow

Intake, Heated Booth:

Outside air is filtered twice, once as it enters in through the air make up unit located next to the spray booth, and again as it passes through the intake plenum ceiling filters. In this example this booth is equipped with a Spray & Cure heating unit.

Heated Side Down Draft

Intake, Non Heated Booth:

The outside air is filtered once, through the ceiling intake filters before entering the work area.

Non Heated Side Down Draft

Exhaust:

The filtered air travels vertically downward to the bottom of the booth (down draft). Finally, the air is filtered of overspray and particulates by the exhaust filters before exiting the booth. Marathon uses standard size intake and exhaust filter media, available from most paint and refinishing suppliers, or directly from Marathon.

The **ETL Listing** (certification) is confirmation that every aspect of our construction methods and materials meet or exceed the build and safety code standards that have been established by NFPA 33. This is important, as your Fire Inspector will require proof of compliance before approval. Be ready for final approval, without last minute surprises or costly delays. All of our spray paint booths are ETL Certified.
